Source: U.N. Statistical Office for 1995- 1997 and Polish Central Statistical Office for 1998 - 2000

Poland's pork production for 2002 is forecast at 1.6 million tons, up 3 percent as producers capitalize on lower feed grain prices and begin recovery after 3 years of falling production. Pork is the primary meat produced in Poland, and demand is mostly satisfied with domestic production. Pork imports are not a significant part of consumption, but lower domestic supplies of pork in the last quarter of 2001 and higher prices on the domestic market will stimulate additional imports for 2002. Most of the imports originate from the EU. Poland's exports are forecast to increase in 2002, but still below record levels. A recent decision by the EU Permanent Veterinary Committee to recognize Poland as free from classical swine fever may help Polish pork exports and improve the import market perception of Polish meat. Exports to Russia account for over two-thirds of Poland's total, and most of this is pork sausage. Pork exports to the United States are growing, especially canned hams.
